The production of a glycosylation variant human tPA (LAtPA--longer acting tissue plasminogen activator) from an expression vector containing the murine whey acid promoter (WAP) open linked to the cDNA of a modified version of human tPA was examined in transgenic dairy goats. Two transgenic goats were identified from 29 animals. The first animal, a female, was mated and allowed to carry the pregnancy. Milk was obtained upon parturition and was shown to contain enzymatically active LAtPA at a concentration of 3 micrograms/ml.</p> <p>PMID: 1367544 [PubMed - indexed for MEDLINE]</p>
